REPORT TIMETABLE FOR DISEASES/CONDITIONS (for a complete listing of NC Reportable Diseases, please call 919-715-7404)

Highlighted diseases

* Category A Bioterrorism Agents/Diseases (report immediately by phone)

** Disease/Condition with Pandemic Potential (report immediately by phone)

** Reportable within 24 hours after the disease or condition is reasonably suspected to exist. (by phone and form)

All Other Conditions

All other conditions, report within 7 days. (by form)

REPORT FORMS can also be found on-line at www.meckhealth.org

1 264 newly diagnosed HIV disease cases and 121 newly diagnosed AIDS cases were reported in Mecklenburg County during 2016 (based upon the most recent surveillance data). During the same time period, there were 489 newly diagnosed Syphilis cases (primary, secondary and early latent). Readers should note that HIV disease represents all diagnoses of HIV infection regardless of the stage of the disease. Therefore AIDS cases are considered a subset of HIV disease. HIV disease reports and AIDS case reports should never be combined to estimate an infected population, and should be considered separately.

2 Category A Bioterrorism Agents/Disease including pathogens that are rarely seen in the United States and that pose a risk to national security because they can be easily disseminated or transmitted from person to person; result in high mortality rates and have the potential for major public health impact; might cause public panic and social disruption; and require special action for public health preparedness.

3 Case numbers are lower than expected or not available due to transition to a new reporting system.

4 Rabies: 1 Coyote (February)

Note: For influenza statistics, refer to www.flu.nc.gov

Statistics compiled by Mecklenburg County Health Department Epidemiology, Communicable Disease, TB and STD Program FEBRUARY 2018
