

# My Own Container Garden

## Tools for Making Your Own Container Garden:

- A plastic tub about 12" square and 6" deep
- Hammer and Nail
- Pebbles
- Potting Soil
- Seeds or Plants
- Tray or Lid

**Step 1:** Make holes in bottom of container. The holes allow extra water to drain out. Too much water in the soil can cause root damage.

**Step 2:** Fill the tub. Cover the bottom with pebbles. Then fill container with potting soil. Set your container on tray or lid to catch extra water.

**Step 3:** Plant your plants or seeds. Space the plants or seeds according to the package directions. Be sure to label your plants with tags or Popsicle sticks. Gently cover seeds or root bundle with soil.

**Step 4:** Don't forget to water!
