

**MECKLENBURG COUNTY**  
Land Use and Environmental Services Agency  
Code Enforcement

Under North Carolina law, in order to install low-voltage wiring, a contractor's license is required unless you meet the following exemptions:

**EXEMPTION OF CERTAIN LOW-VOLTAGE WIRING SYSTEMS**

- (a) Exemption. Except a fire alarm, burglar alarm or low voltage wiring system as defined in Rule .0804, the installation, maintenance, or repair of low-voltage wiring systems may be performed by those not licensed by the Board if **all** the following conditions are met:
- (1) The system is not required by the NC State Building Code;
  - (2) The low-voltage control circuit and power supply is a Class II or Class III system as defined in the National Electrical Code other than that described in the National Electrical Code;
  - (3) The system operates at a voltage not in excess of 50 volts or meets the provisions for sound-recording and similar equipment in the National Electrical Code;
  - (4) No part of the system is installed in an area considered as hazardous under the National Electrical Code;
  - (5) The system is current limited or protected by a circuit breaker, fuse, or other current limiting device; and
  - (6) A failure in the system would not, in the opinion of the electrical inspector having jurisdiction, create a shock or fire hazard to persons or property.

I certify that I have read the requirements above for exemption from licensure to install low-voltage wiring, and that my project meets all those conditions.

I also understand and agree that if my project is found not to meet the above requirements, the issued permit shall be revoked, and a Stop Work Order issued for the work done.
