

LEGEND

- 1 CECIL: Gently sloping to strongly sloping, well drained soils that have a predominantly clayey subsoil; formed in residuum from acid igneous and metamorphic rock
- 2 CECIL-URBAN land: Nearly level to strongly sloping urban areas on well drained soils that have a predominantly clayey subsoil; formed in residuum from acid igneous and metamorphic rock
- 3 IREDELL-MECKLENBURG: Nearly level to strongly sloping, moderately well drained and well drained soils that have a predominantly clayey subsoil; formed in residuum from diorite, gabbro, and other rock high in ferromagnesian minerals
- 4 WILKES-ENON: Gently sloping to steep, well drained soils that have a predominantly clayey subsoil; formed in residuum from diorite, hornblende schist, and other basic rock, or from mixed acidic and basic rock
- 5 ENON-HELENA-VANCE: Gently sloping to strongly sloping, well drained and moderately well drained soils that have a predominantly clayey subsoil; formed in residuum from mixed acidic and basic igneous and metamorphic rock
- 6 PACOLET-CECIL: Gently sloping to steep, well drained soils that have a predominantly clayey subsoil; formed in residuum from acid igneous and metamorphic rock
- 7 MONACAN: Nearly level, somewhat poorly drained soils that have a predominantly loamy subsoil; formed in fluvial sediment on flood plains
- 8 GEORGEVILLE-GOLDSTON-LIGNUM: Gently sloping to strongly sloping, well drained and moderately well drained soils that have a clayey or loamy subsoil; formed in residuum from fine grained schist or slate

GENERAL SOIL MAP
 MECKLENBURG COUNTY, NORTH CAROLINA

Each area outlined on this map consists of more than one kind of soil. The map is thus meant for general planning rather than a basis for decisions on the use of specific tracts.
